

BINAR

Improving your productivity

Increased cooperation in the Binar Group for optimized solutions

There is a lot going on in the Binar Group right now. The integration process between our automation companies Binar Elektronik AB, Binar Olofström AB and Kahlman Produkter AB continues. As from 23 March all three will introduce a new joint Binar logotype. At the same time Kahlman Produkter AB will change its name to Binar Quick-Lift Systems AB and open up new facilities in Trollhättan, where the company will be located next to Binar Elektronik AB and our head office, Binar AB.

SensActive®, our laser-based object recognition system for e.g. Bin-picking, has until now been developed and marketed by our subsidiary Dynamis AB in Karlskoga. As from 1 April operations will be transferred to Binar Elektronik AB. In a similar way business area Automation (sheet metal automation, material handling and microwave tunnels) in Titech System AB in Tidaholm has been transferred to Binar Elektronik AB.

Hereby Binar Elektronik AB will have branch offices in both Karlskoga and Tidaholm while Titech System AB will focus its business solely on engineering.

The purpose of the increased integration and new graphic profile is simply to emphasize the variety and depth that the Binar Group holds in industrial automation.

Ingemar Pettersson

CEO Binar AB
